What makes me go

I like a challenge. Throw a project at me and I'll make it happen. I'm not afraid to learn new technology and I hunger to hone my skills to perfection. Building web based applications is my passion and graphic design is an added creative bonus.

What I do

I've been working in the web profession for nearly a decade and things like Flash, XHTML, CSS, PHP, JSP, XML, XSL, Java, JavaScript, ActionScript and MySQL come naturally. I've even spent some time with ASP, Perl, Oracle and C++, and if there's a project requiring another acronym's skill set then give me Google and I'll figure it out.

Aside from the code I write I'm also right at home working with graphics, whether it's designing something myself in Photoshop or working with assets provided by another designer. I'll make the web page look just like the Photoshop comp.

I can gather requirements, create wireframes, prototype pages, create the visual design and build the final result, or put me on a team and I'll handle my part of the equation. It's all about creating.

Employment History

Concrete Websites	December 2007 to Present
<ul style="list-style-type: none">Developed a number of Flash-based 'widgets' for a variety of purposes including a file upload manager, advertising demo and a FaceBook application in both AS2 and AS3.Fast-paced LAMP application development.
